

PEAK DESIGN MOBILE STRAPS COMPATIBILITY & STRENGTH GUIDE

WHAT ARE MOBILE STRAPS DESIGNED FOR?

Peak Design Mobile Straps are built for phones and light everyday carry, with optional use on small, compact point-and-shoot cameras. They use our new Micro Anchor™ connectors—based on our iconic Anchor Link™ system—to deliver total security with no unnecessary bulk.

STRENGTH & DURABILITY (HOW WE MESSAGE IT)

- Micro Anchor™ Strength Rating
- Rated to withstand 50 lbs (23 kg) of force per attachment point
 - Tested under controlled lab conditions with built-in safety margins
 - NOTES:
 - This strength rating is intended to inspire confidence and aligns with how Peak Design communicates strap durability across our camera strap lineup.
 - We intentionally do not publish a camera “weight limit” due to real-world variables such as movement, impact, and attachment design.

CAMERA COMPATIBILITY — READ BEFORE ATTACHING

Mobile Straps can be used with small cameras, but proper attachment is critical.

- COMPATIBLE CAMERAS

 - Compact, lightweight point-and-shoot cameras
 - Smooth, rounded strap eyelets
 - Examples: Ricoh GR, similar compact cameras
- INCOMPATIBLE

 - Cameras with sharp or unfinished metal eyelets
 - Mirrorless/DSLR cameras (use PD camera straps instead)
 - Eyelets designed for traditional split rings only

Abrasion Warning (Most Important Safety Note)
Sharp eyelets can wear through Micro Anchor cord over time, potentially leading to failure. Use a split ring as an intermediate connection, the same solution recommended for Peak Design camera straps.

DEVICE COMPATIBILITY MATRIX

DEVICE TYPE	COMPATIBLE	NOTES
Peak Design Phone Cases	Yes	Designed specifically for Micro Anchor attachment
Apple iPhone cases with strap loops	Yes	Tested and approved
Small point-and-shoot cameras	Yes (with checks)	Designed specifically for Micro Anchor attachment
Ricoh GR series	Yes	Ideal example of compatible camera
Film point-and-shoot cameras	Yes	Lightweight + simple eyelets
Mirrorless / DSLR cameras	No	Use Peak Design Camera Straps
Cameras with sharp metal eyelets	Not directly	Abrasion risk (see warning)
Keys, AirPods, small wallets	Yes	Ideal everyday carry

POSITIONING SUMMARY

- DESIGNED FOR

 - Phones
 - Light everyday carry
 - Compact point-and-shoot cameras
- NOT DESIGNED FOR

 - Mirrorless cameras
 - DSLRs
 - Heavy or sharp-eyelet camera systems

IMPORTANT SAFETY NOTES (FOR PARTNERS & CUSTOMERS)

- Mobile Straps are optimized for phones and light carry
- Cameras are more fragile than phones—extra care is required
- Improper attachment or incompatible eyelets can increase drop risk
- Always inspect Micro Anchors and attachment points periodically
