Open-Ear Earbuds' Introduction

Open Air-Conduction TWS

In-Ear TWS

Bone-Conduction Headphones

Open Ear Design, improved comfort
Bigger speaker, better sound quality
Ergonomically ear hook, more stability
Situational awareness, greater security

Stuffy and uncomfortable
Unstable in motion
No situational awareness

Poor sound quality
Clamping force causes pain
Lack of bass

Open-Ear Comfort

A non-intrusive design to eliminate discomfort and allow you to enjoy a breathable listening experience. Air conduction delivers richer audio, superior to that of bone conduction.

Snug, Secure, Agile

Crafted with gentle skin-loving material

Ergonomically designed with 0.7mm thick aerospace grade titanium wire

Detachable and adjustable neckband to guarantee total stability

Beyond Thumping Bass

16.2mm oversized drivers with titanium-coated domes deliver robust bass, a wide sound stage, and clear audio.

LDAC

True Spatial Audio

An innovative design combines multiple sensors for dynamic head tracking to provide true Spatial Audio that moves as you do - for immersive listening.

Directional Acoustics

Uniquely designed, the nozzle optimizes acoustic reflections, allowing for precise re-direction of sound waves towards your ears, preventing sound leakage while enhancing bass quality.
