

SeaPal Waterproof Case
Instruction manual

Congratulations on purchasing your JOBY SeaPal Waterproof Case. The JOBY SeaPal opens new possibilities to advance your phone photography and videography. You can also share the images you've captured with friends and family via social media, iMessage, SMS and livestream.

Please read the following instructions and care tips before using your JOBY SeaPal for the first time.

What's in the box

- JOBY SeaPal Waterproof Case
- Silicone O-Ring Grease
- Wrist Laynard
- Bumper Set

Table of Contents

- [Whats in the box](#)
- [Nomenclature](#)
- [Initial setup](#)
- [Using the JOBY SeaPal underwater](#)
- [Safety information](#)
- [Maintenance](#)
- [Limit of liability](#)
- [Warranty](#)
- [Servicing](#)

Nomenclature

Initial Setup

- Before using your JOBY SeaPal for the first time you must conduct a water test without the phone as explained below. You can perform the water test in any body of water that allows submersion down to depths of 30-90cm. Make sure the O-Rings are clean and dry before testing. If the O-Rings or the JOBY SeaPal show any signs of damage do not use.
- Attach the included JOBY SeaPal Wrist Lanyard by tying the tether to the leash attachment point.
- Close the backplate and lock the side latch. An audible 'click' should be heard to indicate the latch is locked.
- Conduct a visual inspection of the JOBY SeaPal to be sure a good seal has been created by checking that the entire backplate has engaged well with the front section, and there is no debris or other material interfering with the sealing O-Ring. A small gap between the backplate and frame is normal.
- Always use a wrist lanyard or leash when using the JOBY SeaPal in any body of water as it is negatively buoyant, therefore if it is dropped, it will sink.
- Once the JOBY SeaPal Wrist Lanyard is attached to your wrist you can immerse your JOBY SeaPal into the water.
- Hold the JOBY SeaPal and immerse it into the water for a period of 20 seconds to ensure it is watertight.
- Remove the JOBY SeaPal from the water, dry with a towel and check that no water has penetrated inside. Point the JOBY SeaPal up and check around the backplate edges, then point it down and check the edges of the front port

Turn the latch
clock-wise to
lock

for any water that may have penetrated. Water can enter the JOBY SeaPal when opening the backplate, so do not confuse this with a leak.

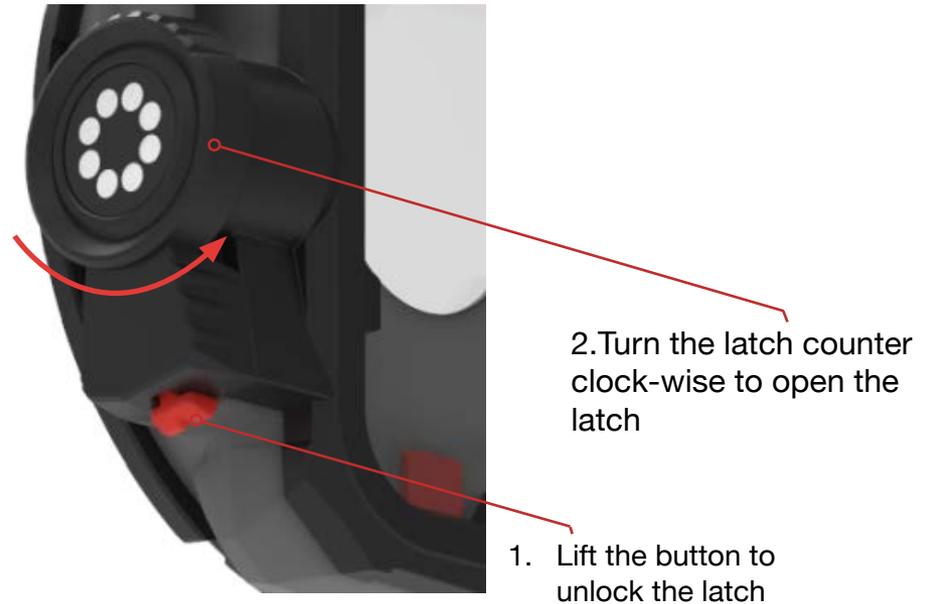

- If this is all clear and there has been no ingress, repeat Step 1 and hold the JOBY SeaPal under the water for 30 seconds.
- Repeat Step 2, and if no water has entered you are ready to install your phone and begin shooting.
- If any water enters the JOBY SeaPal during the test, dry it out completely and then repeat the instructions on installing your port and water testing.

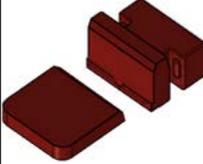

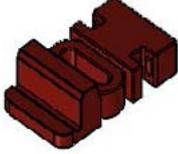

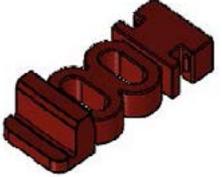

Installing your phone

Make sure the inside of your JOBY SeaPal is completely dry and clean. Clean the phone screen of any fingerprints or debris. Remove the phone case from the phone if any. Insert the phone into the rubber bumpers inside the JOBY SeaPal using the bumper layout for your phone. These are located starting on the next page.

The home screen should face upwards so you can see your screen through the transparent membrane.

Before closing the backplate, make sure the main O-Ring is free from any sand or other debris. Close the backplate and lock the side handle latch. Take care that your leash does not interfere with the hinge or O-Ring when closing the backplate. Now your JOBY SeaPal is ready for the water, snow, dirt or anywhere else you can take it!

- Samsung S22 Ultra

Install the included bumpers based on the bumper layout above.

NOTE: It is recommended any screen protectors be removed before using the JOBY SeaPal. The screen protectors reduce touch sensitivity through the rear membrane and can make controlling the phone difficult.

Venting your JOBY SeaPal

‘Venting’ is a technique of expelling air from the JOBY SeaPal before closing the backplate. To ‘vent’ your JOBY SeaPal, apply pressure to the rear membrane as you close the rear backplate and lock the side handle. Pushing onto the phone with 1 finger will remove a small amount of air, or using your whole palm will remove a greater amount of air. Each action will have different pros and cons as sensitivity and water interference will vary through the techniques. A unit that is not vented will be slightly less sensitive when controlling the touchscreen and more resistant to water interference. A fully vented unit will be much easier to control and navigate the touch screen, but will be more likely to receive water interference. Experimenting with these techniques will allow you to see which technique suits you and your application best.

Using the JOBY SeaPal underwater

Your phone uses a capacitive touch screen which will not function the same underwater as it will above. Functionality loss will occur to the touchscreen when the JOBY SeaPal is used underwater. Before going underwater make sure that your camera app is open. When staying below the surface for extended periods (ie: diving) follow the below tips:

- Set the phones ‘Auto-Lock’ to never.
- Settings>Display & Brightness>Auto Lock
- Turn ‘Airplane Mode’ on.

- Keep the camera app open before you submerge
- Select your preferred capture method first
- (ie: photo or video etc.)
- All settings can be changed as soon as you resurface with your JOBY SeaPal.

Using your camera

Your JOBY SeaPal allows full control over the phone camera App. When you have launched the app it is easy to swipe through capture modes, swap between front and rear cameras, review pictures.

Placing your phone in ‘Airplane Mode’ will prevent photo or video capture being interrupted by calls or notifications. To lock focus and exposure of a subject, press and hold the touchscreen on the desired subject.

Touchscreen

The JOBY SeaPal rear membrane allows you full access to your phone touchscreen. Making capturing images and sharing them a seamless experience, while protecting your phone’s delicate touchscreen. The new rear membrane material provides a more responsive and intuitive experience while navigating your touchscreen.

Safety information

- Do not exceed depths of 10m/33ft.
- Do not exceed depths of 90cm/3ft without a phone installed in the SeaPal.
- Always use your SeaPal with a leash or the provided Wrist

Lanyard.

- Do not leave your gear in temperatures greater than 30°C/86°F
- Do not store your phone inside the SeaPal in direct sunlight.
- The included Wrist Lanyard is intended only for calm water use. The 'SeaPal Sports Leash' (sold separately) should be used in the surf or any turbulent water.
- Contains small parts which may be a choking hazard. Not suitable for children under 3 years of age
- **WARNING:** Practice extreme caution when diving into water, swimming in surf or other dynamic outdoor pursuits. Only use this product in settings that are within yours or other's capabilities. Serious injuries or drowning could occur if you are not a competent swimmer for the prevailing conditions

Maintenance

- After each use, remove your phone before again closing the SeaPal and rinsing it thoroughly in fresh water.
- Rinse the latch mechanism and spring thoroughly after each use to ensure it retains full operation.
- Dry your SeaPal before storing.
- Store in a cool, dry area.
- Use the provided grease periodically on the O-Rings to reduce friction and increase operating life. Only a small amount of grease should be applied each time

Features and Benefits

Risk: Traveling via airline with the dome attached may create internal pressure and a breach.

Solution: Do not travel by air with your dome installed on your JOBY SeaPal Waterproof Case. Always detach the dome from the case when traveling by air.

Risk: Foreign objects like sand or dust attaching to the O-ring of the case and dome or not installing the O-ring properly will create a breach.

Solution: Inspect the O-ring before each use. Use an air blower to remove foreign objects.

Risk: Phone overheating while recording for an extended period.

Solution: Turning on airplane mode and closing all apps besides your camera app will reduce your phone's heat production. Try shooting shorter, multiple video clips instead of longer ones. Some high-end phones like iPhone 15 Pro series are prone to overheating in tropical climates. It's also recommended to turn off your phone, remove it from the JOBY Waterproof Case and vent before reusing.

Risk: The SeaPal floats with dome installed

Solution: Trapped air within the dome can cause the unit to float from its side. Using the Shutter Grip or holding the case with both hands will provide better stability. Always use your SeaPal with the provided leash to avoid losing it.

Risk: Wiping the SeaPal lens port or dome lens surface with abrasive fabrics will scratch the lens.

Solution: When cleaning the lens port or dome lens surface, only use camera lens cleaning paper to wipe it clean.

Risk: Foreign objects like sand in contact with the inside part of the dome lens will leave marks.

Solution: Do not place the dome on the ground with the bottom facing up. Always ensure the front part of the lens surface is facing up when placed down. Use an air blower to blow out foreign objects to avoid dirt accumulation. When wiping is needed, only use camera lens cleaning paper.

Risk: Improper rinsing of the SeaPal case latch can lead to salt or fine sand build up causing the latch to stick.

Solution: Rinse the latch mechanism and spring thoroughly with fresh water after each use. While the latch is in a closed position, actuating the red latch release button several times under running water allows fine sands to be rinsed away. If you feel a lot of resistance, perform this task while the latch is in a slightly open position, while squeezing the front and back plates together at the same time to avoid water slipping into the case.

Risk: Too much friction with the O-ring of the case and dome when opening and closing, creating a breach.

Solution: Use the provided grease periodically on the O-Rings to reduce friction and increase operating life. Only a small amount of grease should be applied each time.

Risk: Improper rinsing of the shutter button of the SeaPal shutter grip leading it to stick due to salt or fine sand build up.

Solution: Rinse the shutter button thoroughly with fresh water after each use. Pressing the shutter button several times under running water allows fine sand to be rinsed away.

Warranty info, limit of liability

Thank you for purchasing a JOBY product.

JOBY products are warranted to be fit for the purpose for which they have been designed, and to be free from defects in materials and workmanship.

This guarantee does not cover the product against subsequent damage or misuse. As JOBY SeaPal products are often used in extreme and volatile environments, we are unable to cover for loss or damage of equipment. Loss of income, reputation or other financial expenses, such as personal injury are also not covered by this warranty.

The period of validity of the Standard Limited Warranty is defined by the law in force in the country, state or region where the product is sold. Please retain your receipt as proof of purchase.
